

$$\text{Accuracy} = \frac{(TP+TN)}{(P+N)}$$

$$= \frac{0+1}{4} = \frac{1}{4} = 25\%$$

$$\text{Sensitivity} = \frac{TP}{TP+FN} = \frac{TP}{P} = \frac{0}{2} = 0\%$$

$$\text{Specificity or TNR} = \frac{TN}{FP+TN} = \frac{TN}{N} = \frac{1}{2} = 50\%$$
